

## ACTIVITY 2H: THE INSIDE STORY STUDENT WORKSHEET

### THE INSIDE STORY

Below, and on the following page, are pictures of human skeletons. Cut out the skeletons and see if you can sequence the pictures from youngest to oldest. See if you can guess the age of each skeleton then place each skeleton in its appropriate box with the description that matches it on the handout "Changes in the Skeleton Across a Life Span." If a description has more than one box, place the skeletons in order according to increasing age. Compare your sequencing with the teacher's answers. Then, glue your skeletons inside the correct box.
