

ACTIVITY 6A: STUDENT WORKSHEET — AVERAGES

**Number of
Participants**

Number to be Averaged

Average

<p>2 Participants</p>		
<p>5 Participants</p>		
<p>10 Participants</p>		
<p>20 Participants</p>		

1. Did the answers change as more numbers were averaged together?
2. Why do you think this change occurred?
3. If you wanted to make a generalization about the data, which average would be most valid? Why?
